Hi folks,

I'm getting in early on this one as I'm off on my holiobops for a week and likely will miss the deadline whilst sitting in a hot tub!

Ongoing draft attached - I've cropped the appendices / bibliography and skeleton of further chapters.

Essentially this one tops and tails the methodology applied to the lit review and then completes the first of four "tracks" I'm trying to pull together.

The other three are

- AI / NLP applications in child grooming,
- Impelementation in a policing environment
- Ethics / governance

These three should (I hope for the sake of the word count) be shorter than the one presented - and should hopefully lead to a coherent(ish) position on what th efinal research direction will be.

Have a lovely BH weekend and see you all next month (and in the feedback!)

Good morning Pat,

Hope you had a lovely time away!

Firstly I have to say, the working title with "TITLE TO BE CONFIRMED!!!" genuinely made me smile.

Thank you for the feedback you gave me about including a PRISMA diagram as that's definitely something I'll look to incorporate. I noticed from yours that it really makes the screening process transparent and accessible. I also appreciated your honest reflections around the search process as could completely relate to these!

I found this next chapter starting your literature review very easy to read as it flows naturally from the data, through the models, and into the identification of the research gap/opportunity and included a solid range of contemporary references. I particularly liked the way you summarised the three grooming models in a clear comparative table. Although you explained them well in the text, the table really highlighted the depth of your understanding and made the distinctions between the models immediately clear for me reading.

I am very interested to see how your conceptual framework develops..

Beth

Hi Pat,

Hope you had a lovely time away!

Its reassuring to hear that you have multiple routes too (I'm also concerned about the wordcount!) as I feel I have to do this for the big picture which looks like you're doing a similar thing.

Do you plan to do one entire SR to create the final assignment? Or split it into patches as in the brief? One to ask the group at the end of the month I guess!

I much prefer your methodology to mine, I think I'm being too rigid to the PRISMA layout we give the students so thanks for giving me the confidence to change this! Not all though as Beth and you have both said some pro's in this area - but I think yours will be better focused to the brief and help with wordcount worries!

Its very reassuring that you also don't have a framework yet haha- but its obvious from your structure and writing that this is the next step, even without knowing the topic so nice one there!

I hadn't thought to consider ethics yet, but I suppose this is even more key for your topic but also the transparency as I plan to use text-mining (I think!). I will reply on my thread regarding this!

Last superficial point is I love the layout and colour coding, helps keep it interesting and guide the eyes while not being too much. I think you're doing a great job so far and look forward to more!

Hi Lauren,

Conceptual Framework

Work out what this is!!

This made me smile as I'm very much in the same place!!!

I'd be really intersted in what you've done in applying text-mining recommendations to your search process! The search strings come across to a non-laser aficionado as comprehensive and targetted - I'd be keen to know how you weeded the huge amount of returns into something manageable.

I like the table structure of how you've thematically broken down the results into Species / Application / Study - it makes a lot of sense - presumably a narrative will bring it all together.

You seem to work in a similar way to me where the ideas get jotted down, the structure takes shape organically and then it all comes together at the end - the structure looks like it's really coming together!

Pat

Crikey Beth - You're properly ahead on this!!!

You've clearly got a strong grip ont he evidence base around the use of TRiM in policing and the use of multiple theoretical approaches to scaffold the conceptual framework is easy to understand and step through.

I like the critical assessment in sections 3.4 and 4.3 which resonated with my own experiences of seeking assistance due to some fairly funky exposure to nastiness in the last couple of years - the thought of the process being very much one of "how is this going to impact my career" and "this is very much a self preservation exercise for the organisation" almost acted as compounding factors onto an already emotive decision around the assitance process.

The conceptual framework makes sense to me hwoever I wonder if, give the stated goal is to understand the extent to which TRiM aligns with the realities of police trauma exposure, and how officers experience its role.... could there be a more overt emphasis on the officer experience? I initially looked at it as a slightly systems led model (I'm not convinced I've explained that right!!!!)

Only other thing I wondered as to whether or not should be included was a PRISMA diagram - the image on p6 largely covers it - but I don't think it ultimately define the position of "I was left with X resources for this review..."

See you later in the month!

Pat
